

VALICRED

THE DROP

ACADEMIC CREDIT ASSESSMENT & EXEMPTION ROADMAP

STUDENT APPLICANT

Alex Vance

TARGET INSTITUTION

Target University (Higher Education Provider)

TARGET DEGREE

Bachelor of Commerce & Information Systems

STUDENT STATUS

International Student

ACADEMIC PROGRESSION

2nd Year Undergraduate

Prepared under standard prior learning and credit transfer frameworks across Australian, UK, US, and international universities.

TABLE OF CONTENTS

Executive Summary & Your Potential Savings	03
Total fee waivers, study hours saved, and how 3–4 months of high-velocity work qualifies.	
Unit 01 Dossier: ISYS2001 — Database Systems & Data (Year 2 Technical)	04
Relational database schema modeling, SQL query logic, cloud hosting, and code docs.	
Unit 02 Dossier: MGMT3000 — Team Leadership & Sprints (Year 3 Advanced)	05
Agile sprint management, contractor coordination, software runway budgeting, and mentor updates.	
Unit 03 Dossier: EDCN4001 — Technologies: Coding for Educators (Year 4 Applied)	06
Programming logic, developer onboarding tutorials, debugging support, and technical training.	
Unit 04 Dossier: MKTG2000 — Digital Marketing & Growth Strategy (Year 2 Applied)	07
Customer research, ad campaign management, paid acquisition, and conversion metrics.	
Getting Your Paperwork in Order & Portal Guide	08
Company letterhead rules, redacting private data, and the 90-day staggered submission timing.	
Campus Support, Visa Safety & Our Guarantee	09
Free Student Guild advocates, graduate visa safety check, and our 90% refund promise.	

THE EXECUTIVE SUMMARY

4

UNITS WAIVED

A\$18,400

DIRECT TUITION SAVED

600 HRS

STUDY TIME SAVED

HOW CREDIT FOR PRIOR LEARNING ACTUALLY WORKS

Universities give credit transfer complicated names like RPL or CRL, but the concept is simple: if you can prove you already know the material from real-world work, universities cannot justify charging you thousands of dollars to sit in beginner lectures. You are applying to have that prior work formally counted toward your degree.

⚡ Why 3 to 4 Months of Real Work Qualifies

A university unit is only about 36 hours of lectures across a 12-week semester. When you spend 3 to 4 months building a real product, freelancing for paying clients, or running live software, you log hundreds of hours solving real problems. You have already done the practical work—now you just need to show it to the faculty.

🟡 A Quick Favor & 10% Cash-Back Bounty

Once your university hands down its final credit decision, submit a copy directly through our [Outcome Portal](#) [↗]. Win, lose, or mixed, we will instantly refund **10% of your report fee directly back to your card** as our thank-you for helping train our curriculum mapping models.

⚠️ A Quick Heads-Up Before You Start

Keep this report for yourself. Do not upload this document directly into your university portal. Universities want to see your actual employer letters, client contracts, and work samples—not an outside report. Treat this PDF as your private roadmap.

STEP 01: GATHER

Collect the physical documents listed under each unit on Pages 04–07.

STEP 02: VERIFY

Get signed confirmation letters from your clients or co-founders on letterhead.

STEP 03: LODGE

Submit using the 1-week interval timing detailed on Page 08.

ISYS2001 — DATABASE SYSTEMS & DATA

School of Information Systems • 25 Credit Points

Academic Scope: Designing relational database tables, writing SQL queries, setting up cloud databases, and keeping clean technical documentation.

1. DESIGNING DATABASE SCHEMAS & TABLE RELATIONSHIPS

When building your project, you set up a working PostgreSQL database from scratch—mapping out table connections, assigning primary and foreign keys, and organizing user and transaction data up to third normal form (3NF). In your university application, explain this as relational schema architecture and normalization, showing how your table structure prevented duplicate data and kept records organized under live conditions. Back this up by attaching an exported Entity Relationship Diagram (ERD), SQL table creation scripts, or architecture notes from your setup.

2. WRITING REAL SQL QUERIES & DATA HANDLERS

To power your application, you wrote practical SQL queries—running multi-table JOINS, filtering dataset views, and adding indexes so user information loaded quickly without lagging under live traffic. In your portal statement, describe this as query optimization and backend data retrieval, highlighting how your queries handled data cleanly under real operating conditions. Prove this by attaching sanitized SQL query snippets, backend controller functions, or Git commit logs showing your database query work.

3. SETTING UP CLOUD HOSTING & DATA SECURITY

Rather than doing textbook exercises on a laptop, you deployed and maintained a live database on cloud infrastructure (like Supabase, AWS RDS, or Render), configuring environment secrets, connection pools, and SSL encryption to safeguard user data. In your application, frame this as cloud database provisioning and operational security governance, emphasizing your responsibility for real uptime and user privacy. Validate your claim by attaching a redacted screenshot of your cloud dashboard, deployment notes, or hosting invoices.

4. CODE DOCUMENTATION & VERSION CONTROL

As your project evolved, you tracked database migrations and schema updates using Git version control, documenting branch changes, migration scripts, and setup guides for your team or co-founders. In your submission, present this as technical documentation and standard version control, proving you follow professional software engineering practices. Establish this outcome by submitting repository commit summaries, pull request review threads, or setup README documentation authored by you.

WHAT TO COLLECT FROM YOUR FILES:

- **Proof of Technical Work:** Database schema diagram (ERD), sanitized SQL query snippets, cloud console screenshot, or project README.
- **Proof of Role & Dates:** Co-founder confirmation note, client agreement, contractor invoices, payslips, or business registration details.

💡 **Your Application Blueprint:** Highlight that you managed live, production databases handling real user requests. Make sure you black out all live database passwords, secret API keys, and connection strings before compiling your submission portfolio.

MGMT3000 — TEAM LEADERSHIP & SPRINTS

Faculty of Business & Law • 25 Credit Points

Academic Scope: Leading teams through Agile sprints, managing external contractors, tracking software operating budgets, and reporting to mentors.

1. MANAGING SPRINTS & TEAM PRIORITIES

While leading product development, you organized Agile sprints—breaking project goals into milestones, assigning feature backlogs to freelance designers, developers, and testers on Jira or Trello, and keeping everyone aligned with release dates. In your portal statement, describe this as Agile workflow coordination and cross-functional leadership, showing you can guide diverse teams under commercial deadlines. Back this up by attaching exported sprint roadmaps, milestone sign-off sheets, or dashboard screenshots from Jira, Trello, or Notion.

2. BUDGET RUNWAY & MANAGING PROJECT COSTS

You held direct responsibility for project operational costs, tracking monthly server hosting, software tool subscriptions, and contractor payments to protect your project's cash runway. In your university claim, frame this as project cost control and operational budgeting, demonstrating how you monitored resource burn rates to keep project expenditures within commercial limits. Prove this by attaching a sanitized budget tracking spreadsheet, contractor invoices, or financial forecast summaries.

3. SOLVING ROADBLOCKS & SHIPPING DEADLINES

When launch bugs, unexpected technical hurdles, or timeline delays cropped up, you made practical calls—re-scoping features, rebalancing team workloads, and solving critical roadblocks to keep releases on schedule. In your application, present this as commercial risk mitigation and crisis resolution, showing you can make calm, sound decisions when projects hit friction. Establish this by attaching release changelogs, post-mortem notes, or a founder verification letter confirming your decision-making authority.

4. STAKEHOLDER UPDATES & CLEAR PROGRESS REPORTING

You prepared and delivered regular progress updates—summarizing completed sprint deliverables, user engagement numbers, and upcoming priorities for startup advisors, mentors, or clients. In your portal statement, articulate this as structured stakeholder reporting, proving you can translate technical and operational milestones into clear executive updates. Validate this by attaching sample update emails, advisory pitch decks, or meeting minutes you put together.

WHAT TO COLLECT FROM YOUR FILES:

- **Proof of Leadership & Delivery:** Trello/Jira roadmap export, budget spreadsheet, mentor update memo, or contractor brief.
- **Proof of Role & Dates:** Founder verification letter, client contract, contractor payment receipts, or company registration filing.

💡 **Your Application Blueprint:** Year 3 units require proof of team collaboration. Ensure your portfolio highlights coordination with contractors, mentors, or colleagues, demonstrating you operated as an active team leader rather than working alone.

EDCN4001 — TECHNOLOGIES: CODING FOR EDUCATORS

Faculty of Humanities & Education • 25 Credit Points

Academic Scope: Teaching programming logic, algorithmic thinking, building interactive developer tutorials, and guiding learners through digital tools.

1. TEACHING CODE LOGIC & PROBLEM-SOLVING

Having built and shipped working software in Python, JavaScript, or SQL, you understand core programming fundamentals—such as variables, loops, conditional logic, functions, and data structures—at a practical level that goes well beyond introductory theory. In your university portal, describe this as computational thinking and algorithmic problem-solving, explaining how you break complex real-world logic down into manageable, working code. Support this claim by attaching sample script files or clean repository links highlighting your algorithmic implementation.

2. WRITING CLEAR TECHNICAL GUIDES & TUTORIALS

To help non-technical team members and new contributors understand your software, you authored developer onboarding guides, API walkthroughs, and step-by-step setup tutorials. In your application, frame this as instructional technical design, proving you can translate technical concepts into simple, accessible learning materials for beginners. Prove this by attaching digital copies of the developer guides, setup READMEs, or annotated slide decks you authored.

3. HELPING OTHERS TROUBLESHOOT & DEBUG

You actively helped colleagues and early testers troubleshoot technical glitches, diagnosing environment setup errors, walking users through bug fixes, and answering setup questions patiently. In your application statement, present this as technical mentoring and guided diagnostics, showing you can teach others how to problem-solve through technical errors. Establish this outcome by submitting GitHub issue comment threads, troubleshooting chat logs, or a co-founder note confirming your mentorship role.

4. HELPING NON-TECHNICAL PEOPLE ADOPT SOFTWARE

You worked closely with non-technical clients and users to help them adopt new software tools, listening to where they felt confused and creating simpler, more intuitive digital workflows. In your claim, highlight this as human-centered technology adoption and digital accessibility, showing you understand how people actually interact with digital tools. Back this up by providing user onboarding documentation, feedback notes, or client testimonials verifying your support.

WHAT TO COLLECT FROM YOUR FILES:

- **Proof of Technical Training & Docs:** Developer onboarding guide, technical README, slide deck from a workshop, or GitHub issue threads.
- **Proof of Standing & Dates:** Letter from co-founder/client confirming your role in technical onboarding, contractor invoices, or training completion logs.

💡 **Your Application Blueprint:** Education assessors reject raw code submissions without instructional context. Ensure your evidence proves you *explained, guided, or onboarded others* through the technology.

MKTG2000 — DIGITAL MARKETING & GROWTH STRATEGY

School of Management & Marketing • 25 Credit Points

Academic Scope: Commercial customer acquisition, conversion rate optimization (CRO), multi-channel advertising attribution, and ad budget management.

1. CUSTOMER DISCOVERY & TARGET AUDIENCE RESEARCH

While growing a startup or managing client accounts, you researched who your actual customers were—building buyer personas, analyzing customer habits, and launching targeted campaigns tailored to specific audiences rather than shouting into the void. In your university portal, frame this as customer discovery and audience segmentation, explaining how real user research shaped your promotional strategy. Prove this outcome by attaching demographic exports from Meta Business Suite or Google Analytics, backed by a client agreement or invoice confirming your marketing role.

2. CREATING ADS & HIGH-CONVERTING LANDING PAGES

You turned product features into clear, customer-friendly copy, creating social ads, video reels, and landing pages with focused calls-to-action that encouraged visitors to sign up or purchase. In your application statement, describe this as promotional copywriting and campaign design, proving you know how to build consistent messaging that converts consumer interest into measurable action. Back this up by submitting a 2–3 page visual portfolio showing your live ad creatives, landing page copy, and engagement numbers.

3. TRACKING CONVERSION FUNNELS & CAMPAIGN NUMBERS

Instead of guessing what was working, you tracked live performance data across Meta Business Suite and Google Analytics—monitoring click-through rates (CTR), cost-per-acquisition (CPA), and conversion drop-offs across the funnel. In your submission, present this as quantitative marketing analytics and funnel optimization, showing you use real data to refine commercial decisions. Attach screenshots of your campaign analytics dashboards, conversion reports, or monthly client performance summaries to substantiate this.

4. MANAGING AD BUDGETS & RETURN ON SPEND

You held direct responsibility for allocating paid advertising budgets across channels, monitoring spending velocity and tracking Return on Ad Spend (ROAS) to make sure every promotional dollar delivered value. In your portal claim, articulate this as media budget management and financial accountability, proving you understand how to manage promotional capital with commercial discipline. Substantiate this outcome by providing client budget reconciliation sheets, platform billing statements, or client payment records confirming your ad spend stewardship.

WHAT TO COLLECT FROM YOUR FILES:

- **Proof of Work:** A 2–3 page visual portfolio of your live ads, landing page screenshots, or analytics exports.
- **Proof of Role & Dates:** A client confirmation letter, signed contract, invoices, payslips, or bank statements showing client payments.

💡 **Your Application Blueprint:** When filling in the portal text box, emphasize that you managed real client ad spend and held commercial decision-making authority. Assessors look specifically for independent responsibility rather than passive execution.

GETTING YOUR PAPERWORK IN ORDER & SUBMITTING

HOW TO GET A CLEAN VERIFICATION LETTER

Universities are audited institutions, so the professor reviewing your file needs a simple, factual paper trail. When asking your client, co-founder, or manager for a confirmation letter, make sure it covers three basic points:

- **1. Your exact dates and job title:** Explicitly confirming when you worked and what your position was.
- **2. The specific tools and systems you led:** Naming the real software or tasks (e.g., PostgreSQL database modeling, sprint coordination, digital marketing campaigns).
- **3. Real decision-making authority:** Confirming you worked independently rather than just assisting someone else.

Company Letterhead Rule

Letters must feature official business details (trading name, business registration number, supervisor title, and professional email). Plain Word documents without letterhead are turned down.

Blacking Out Private Data

Use a free PDF editor to black out live database passwords, secret API keys, and customer contact details. Professors verify technical structure—not private company secrets.

💡 Recommended Submission Strategy: The 1-Week Staggered Rollout

Our **90% Money-Back Guarantee** has a strict **90-day claim window**. Because universities take 2–4 weeks to assess claims, you must balance giving the faculty enough time while keeping your claim safely within the 90-day guarantee timeline.

The optimal rollout: Submit your two most straightforward units first (Units 01 & 02). Wait **exactly 1 week**, then submit your remaining units (Units 03 & 04). This gives your university time to log your initial credit on file without delaying your final outcomes or risking your 90-day guarantee window.

What to Expect Inside Your University Portal

1. Credit Category:

Select "Informal / Workplace Learning" (do not select "Credit Transfer" unless using a completed diploma).

2. Unit Selection:

Select the exact unit codes from Pages 04–07 (ISYS2001, MGMT3000, EDCN4001, MKTG2000).

3. Your Statement:

Briefly explain what you built and managed, drawing directly from the 4 outcomes listed under each unit.

4. Upload Your Files:

Upload your single, merged PDF containing your signed letters, work samples, and academic records.

CAMPUS SUPPORT, VISA SAFETY & GUARANTEES

FREE ON-CAMPUS SUPPORT

[\[Campus Guild Assist ↗ \]](#)

Your Campus Student Guild / Student Union (100% Free)

If your faculty takes months to reply or pushes back on your credit application, you don't have to fight them alone. Every university has an independent Student Guild or Union with full-time student advocates whose entire job is to represent students in faculty disputes. Always reach out to them first—it's completely free.

PRE-SUBMISSION CHECK

[\[Learn About Aegis ↗ \]](#)

ValiCred Aegis // Document Review (A\$49/unit)

Nervous before hitting submit? Send us your compiled portfolio. We review your manager letters and work samples against university rubrics to catch any red flags before professors see them.

REJECTIONS HELP

[\[Learn About Themis ↗ \]](#)

ValiCred Themis // Academic Grievance Advisory (A\$49/unit)

If a faculty turns down a valid application on a technicality, send us the denial letter. We help draft a formal appeal citing university course rules to overturn the decision.

VISA SAFETY CHECK (GRADUATE VISA RULES)

Receiving credit waivers is completely legal on a student visa. When credit is granted, your university will simply adjust your expected course completion date and issue an updated confirmation of enrolment (eCoE). **Important Note for International Students:** If you plan to apply for a post-study work visa (such as the Australian Subclass 485), make sure that course exemptions do not shorten your study duration below the mandatory 92-week Australian Study Requirement (ASR). Consult a licensed migration professional before accepting waivers if post-study visa pathways are part of your plan.

OUR MONEY-BACK PROMISE & REWARDS

 **90% Full Refund Guarantee:** If you purchase all recommended units, submit the evidence we laid out, and your university turns down every single one within your 90-day claim window, we refund 90% of your total fee back to your card.

 **10% Lifetime Data Cash-Back:** Approved, rejected, or mixed—submit your official university outcome notice directly to our [Outcome Portal ↗](#) to help train our mapping models and receive an instant 10% cash-back reward.
